EXPERIENCE

Jr. SQL Developer
WeSupport Inc. (Nov 2022 – June 2023)
- Development of scripts to extract data from identified sources.
- Unit testing (UT) and System Integration Testing (SIT).
- Appropriate documentation of (work, output).

ACADEMIC PROJECT

Blind Stick Navigation
Freelance (2022)
- The blind stick prototype was developed using Arduino. It has components installed such as an Ultrasonic Sensor, GPS, GSM module, Water Sensor, and Buzzer, which allow blind people to detect objects in front of them. It can also locate the blind people's location by sending SMS to their relatives on the prototype.

Web-Based Appointment and Pet Care System for Vets at Work Clinic
Programmer (2021-2022)
- This project was developed using html, CSS, bootstrap, JS, Ajax, PHP, and API. The system has a log-in account for pet owners and veterinarians. The system provides scheduling an appointment for pet owners as well as payment transactions using the Paymongo API. It can generate diagnosis results and medication that is given by the veterinarian.

Payroll and Time Keeper
Programmer (2018-2019)
- This project helps to manage the scheduling of employees and manage the section, subject, course, time and room with the integration of an attendance monitor for the employee to help track the time in and time out. It was developed using VB.net and MySQL.
